

TABLE 4. Adaptor Plasmids

Adaptor	Polylinker	Purpose	Comments
Clal2	pUC12	To convert a variety of DNA sequences into <i>Clal</i> fragments	It does not interfere with transcription or translation in either orientation.
Clal2Nco	pUC12N	To provide the insert with a eukaryotic leader sequence and an initiator ATG	The prototype <i>NcoI</i> /ATG adaptor is used to ensure efficient expression of inserts in RCAS/RCOS vectors.
SAClal2Nco	pUC12N	To provide insert with a eukaryotic leader and initiator ATG and a splice acceptor	It is used with the defective vector BBAN to express genes from the LTR promoter.
